

TELEGRAM BOT · COMPLETE WALKTHROUGH

SLIMEWIRE BOT

TRADE · SCAN · SIGNAL · SNIPE · RAID

The whole SlimeWire engine, inside Telegram. In your DMs it's a full trading terminal. In a group it's an all-in-one community bot. This guide walks every feature — for members first, then admins — one page at a time.

1-Tap Buy

Scan

Launch Room

Rose & Shield

1 START HERE — BOT & WALLET

MEMBER

Open **@SlimeWiredBot** in Telegram and tap **Start**. Your wallet is created for you and lives inside the bot — non-custodial to you, no sign-up, no seed phrase to write down.

1 Open the bot. Search `@SlimeWiredBot` → tap Start. A menu appears.

2 See your wallet. Tap **Wallet** (or send `/wallet`). It shows your SlimeWire address and SOL balance.

3 Fund it. Send SOL to that address from any wallet or exchange. Balance updates in seconds.

4 Save your backup. On creation the bot hands you a backup. Keep it — it's how you restore your wallet if you ever lose the session.

Everything trades from this wallet, your own funds. The bot only ever acts on a buy or sell you tap or pre-authorize — it never moves money on its own.

SlimeWire will **never** DM you first asking for a seed phrase or to "verify" your wallet on another site. That's always a scam.

Paste any coin's **contract address (CA)** or type **\$TICKER** in your DM — the bot pulls a card with the price, safety read and a ⚡ **Buy** button. That's the whole loop.

⚡ 1-Click Buy (set it once)

Set a default amount + optional exits, and after that ⚡ **Buy** on any coin fires instantly with those settings.

- **Amount** — how much SOL per tap (0.1, 0.5, 1, or custom).
- **Take-Profit / Stop-Loss** — auto-sell at your targets (optional).
- **Trailing stop + break-even** — lock gains as a winner runs; the trailing stop only arms once you're in profit, so it never sells you at a loss.

Manage & exit

/positions

Your open bags, live value and PnL.

/pnl

Your realized profit + a shareable slime PnL card.

Sell

Tap Sell on any position — 25/50/100% or a custom amount.

/chart <CA>

A quick chart with timeframe buttons.

No exits set = you hold and manage it yourself. Turn on **Exit Radar** (Section 5) to get a take-profit ping when a bag tops.

Drop a **CA** or **\$TICKER** in a group (where Scan is on) or in your DM and SlimeWire answers with a full scan card in seconds.

What the card shows

- **Stats** — price, market cap, liquidity, volume, 1h buys/sells, age.
- **Security** — top-10 holder concentration, holder count, dev-sold, mint & freeze authority (● revoked / ● active).
- **Socials** — X, website, Telegram, Pump.
- **Who called it** — the first caller here + how it's done since.

The buttons

Buy on SlimeWire

Opens the coin ready to buy.

Chart

Live SlimeWire chart.

Menu

Opens the deep-dive tools → Section 4.

Refresh

Re-pull the live read.

If Security shows n/a for a fresh coin, SlimeWire fills it straight from the chain — authorities are read off the mint account, so they're almost never blank.

Tap  **Menu** on any scan card for the tools that make SlimeWire different. Each opens right on the same card (no chat spam) with a Back button.

Alpha Radar

Is a **big network** behind this coin? Counts proven-winner wallets, known operators and coordinated funding, and reads whether it has **long-term-runner** shape — not a fast pump.

AI Read

One honest  /  /  verdict + a 0–100 conviction score, built from SlimeShield, holders, dev-sold, authorities and live flow. No hype.

Track the Funds

Follow the money — top-10 concentration, holder breakdown, sniper/insider share, dev-sold and live authorities. "Who can move the price?"

Security, Charts, Socials and Trade-Tools link lists, each loaded with that exact coin.

All three reads are **read-only** — they never trade for you. Use them to decide, then tap Buy yourself.

Send `/signals` in your DM for one menu of opt-in alerts. Toggle what you want — off by default, so nothing floods.

Top Plays `the brain, in your DMs`

The best plays the SlimeWire brain sees — from the scanners, smart-money and wallet behaviour — DMed to you **every ~2 hours**, and **sooner** when one's igniting. Each pick links straight to its chart with a Quick-Buy. Flip it on and you get a taste instantly.

Exit Radar `the sell signal nobody gives`

Watches **your own open bags** and DMs you to **take profit** the moment one tops — a hard fade off the peak, or the dev dumping. Advisory: it tells you, you decide.

Alpha Radar

Pings you when a coin a **big network** is quietly backing confirms a sustained climb — the hold-for-days runners, not fast pops. Fewer, higher-quality alerts.

Send `/room` in the group. The Room turns a chat into a team with a **verifiable** board — the one thing no other bot can do, because we're in the chat *and* everyone has a wallet.

Room PnL

A live leaderboard of members' **real** realized SOL — from their own SlimeWire trades — and "the room is +X ◎ banked".

Top callers

A call only counts if you **actually held** the coin (verified on-chain). Kills the "call everything, screenshot the winners" grift.

Proof-of-Call

A shareable receipt of your best verified winning call — provably yours, flex it.

Join / Leave

Fully opt-in. Join to compete on the board; leave any time.

To get on the board, tap  **Join board**. Your realized SOL and verified calls only count once you opt in.

Send `/copy` (or Trench → Copy the Best). Instead of copying anonymous whales, mirror a **proven** trader from your own Room board — someone you can see the real PnL of.

- 1 Pick a trader.** The menu ranks the room's top members by real PnL — tap "Mirror".
- 2 Set your size.** Choose how much SOL to mirror each of their buys (0.02–5).
- 3 You're live.** When they buy through SlimeWire, **your own wallet** auto-buys the same coin at your size.
- 4 Stop any time.** Tap  Stop copying.

Real money, your own wallet: you auto-buy whatever they ape. It's capped, non-custodial and off by default — start with a tiny size to feel it out.

When a dev sets up a **Community Snipe**, the whole room can get into their launch at the same second — each from their **own** wallet. No pooling, nobody holds your money.

- 1 Join.** Send `/snipe` and tap an amount (💰 0.1 / 0.5 / 1, or Custom). That much auto-buys from your wallet the instant it launches.
- 2 Add presets (optional).** Tap 🎯 **TP/SL** to set take-profit / stop-loss, or skip and manage it yourself.
- 3 Wait for launch.** The moment the dev's wallet deploys (or they hit Fire), everyone's in — you get a DM confirmation.
- 4 Leave any time.** Tap 🚪 Leave before it fires.

Sniping launches is high-risk — coins can rug instantly. Only your own funds, only what you set.

 Narrative Radar /narrative

What the trench is minting right now — clusters fresh launches by keyword so you see the **rotating meta** ("6 'AI agent' coins this hour"), not just single coins.

 Graduation Gauntlet /grad

Only ~1% of coins graduate. Shows the ones **closest to making it** (high on the curve + still alive), so you're in before the DEX pop.

 Leaderboard /leaderboard

Top-10 best callers with **Today / 1W / 1M / 6M** buttons — ranked by real hit-rate.

 Hall of Fame /wins

The biggest tracked calls that hit 2x+.

Find all of these in one place: [/menu](#) →  **Trench Tools**, or jump straight with [/trench](#).

**Flex a win**

Brag a win that names a coin ("+340% on \$OGRE") and the bot answers with a rotating SlimeWire PnL card for it.

**/raid <X link>**

Rally the swamp on a post — tap the like/RT/reply goals, the card updates live as they're hit.

**Karma (+rep)**

Reply "thanks / +rep / ty" to a helpful member to give them +1 rep. See yours with **/rep**.

**/stats**

Group activity — coins called this week, top callers, most-helpful (rep) leaders.

Everything an admin sets up lives in one menu. Send `/menu` (or `/settings`). ● = on, ○ = off — **everything is off until you turn it on**, so nothing floods your chat.

● Buy Bot

Posts every buy of your coin, your art + emoji tiers.

✂ Raid Bot

Live X-raid cards.

🛡 Rose & Shield

Moderation + anti-scam + verification.

🔍 Scan Bot

CA / \$ticker → scan card + flex cards + X-post preview.

🎯 Trench Tools

Community Snipe, The Room, Signals, Copy, Launch Room, boards & radars.

🔔 SlimeWire Alerts

One tap — this channel gets 🗣 plays every 15 min + fresh launches, TP/SL fires, KOL copies & 2x receipts (capped a few/hr).

📋 Referral Contest

SOL/coin-reward contest — counts group invites **and** friends who trade on the site.

🔔 **SlimeWire Alerts** works in any group **or channel** the bot is added to (as admin) — flip it on from `/settings` or type `/slimewire on`. It posts from the same bot, so there's nothing else to set up.

Members can open 🎯 **Trench Tools** too (to join snipes, The Room, signals). Only **admins** can open the settings modules and flip toggles.

● Buy Bot

- Set your **coin** (paste the CA) — the bot posts every buy with whale-tier badges, MC/Liq/Vol and a Quick-Buy button.
- Customize the **image/video**, **emoji** (one per X SOL), a **custom message** and a **minimum buy** to post.

🔍 Scan Bot

- On = pasting a CA or `$ticker` auto-posts a scan card, PnL **flex cards** fire on wins, and pasted **X posts** unfurl with their image/video.

⚔️ Raid Bot

- Anyone runs `/raid <X post link>` → tap the like / RT / reply / bookmark goals → 🚀 Start. The card updates itself live (no API key, no cost). Set custom raid art separately from the Buy art.

Open  **Rose & Shield** from `/menu`. Full moderation + anti-scam, each a clean toggle.

Captcha / Web verify

Mute new joins until they prove they're human (or connect a wallet).

Anti-scam

Delete scam/drain links, ghost "deleted accounts", impersonators, and a shared known-scammer ban list.

OCR image scan

Reads text inside images to catch image-spam — cloud-offloaded, never slows the bot.

Whales gate

Only holders of your coin (min amount) can chat.

Classic tools

Warns, antiflood, notes, filters, welcome/goodbye, anti-links.

Karma

Reply-to-thank rep, surfaced in `/stats`.

Community Snipe `/snipe` → **Dev setup**

-  **Set launch wallet** — paste the wallet you'll launch from (it follows the wallet, so launch anywhere).
-  **Arm** — the room fires the instant that wallet deploys. Fires once, then disarms.
-  **Fire NOW** — the second you tweet the CA, paste it here and everyone snipes immediately (the reliable "tweet-to-snipe").
-  **Throne mode** — everyone enters the same second with aggressive slippage so the fills land together.

Launch Room · **Alpha Radar** · **Referral**

- **Launch Room** — a guided flow that ties Snipe + Raid + The Room + an "Announce launch" broadcast into one.
- **Alpha Radar (group)** — `/alpharadar on` makes the group get the network-backed runner alerts instead of the frequent short-term plays.
- **Referral contest** — open `/settings` →  Referral Contest. Set a **reward** ( SOL or  a coin + amount) and  **how many win** (top 1 / 3 / 5 / 10 — more winners = more people racing), then Start. Members grab `/reflink` — it gives them a **group invite** (new joins count) **and** a **site link** (friends who make a wallet + trade on slimewire.org count too). `/refboard` shows the live leaderboard with each source ( joins ·  site) and marks who's currently in the prizes (). At the end the top N are announced with their payout wallets — you send each reward from your own Wallet → Send.
