

SlimeWire User Guide

How to use everything — the site, the Telegram bot, and sharing to X. Your reference for the whole swamp.
June 2026.

- 10. The Telegram bot
- 11. Sharing & X
- 12. Quick reference

1. Getting started

1. Go to **slimewire.org**. After the intro, hit **Connect** — Phantom, Solflare, or Backpack — or create an account with a username/email.
2. You land on the **Live Terminal**: fresh pairs cooking right now.
3. Two wallet types matter:
 - **Connected wallet** (Phantom etc.) — you approve each trade in the wallet popup.
 - **Managed wallets** (created in Wallets) — unlock everything automatic: server stop-losses that fire while you sleep, snipers, bots, A.I. buying. Backup files download when you create one — **save them**; they are the only restore path.
4. Tap **Enable TP/SL** in the top bar once — that permission lets the server execute your exits. If it ever expires with plans armed, a red warning appears: re-enable immediately.

2. Finding your way around

- **Desktop**: the top bar has six areas with drop-down menus — **Live** (terminal, cooks, trades), **Chart & Swap**, **Intel** (scope, watchlist, KOL, sniper, TP/SL audit), **Ogre Tek** (A.I., launch, bundle, SlimeBot, launch watch), **Portfolio** (wallets, positions, PnL), **Profile**. Everything is two clicks away.
- **Mobile**: the right-side rail holds the same tools — scroll it if your screen is short.

- **Fastest way anywhere:** open the **Ask** bubble and type where you want to go — "open my bags", "where is the sniper", "take me to pnl". It navigates instantly.

3. Reading pairs & SlimeShield

Every pair row shows MC, liquidity, age, volume, and a **SlimeShield verdict**:

Verdict	Meaning
 BUY	Cleaner setup: real liquidity, healthy flow, no hard flags.
 CAUTION	Tradeable but watch it — something is mid.
 RISK	Degen territory. Can run hard; size like it can go to zero.
 AVOID	Hard flags (mint/freeze risk, honeypot pattern, dev history). The site blocks quick-buys on the worst of these.

The score (0–100) folds in liquidity, age, volume flow, sell pressure, bundle risk, dev wallet history, and KOL dump pressure. Check the shield's public track record any time at slimewire.org/proof.

Tap any pair → its chart opens with transactions and the buy panel. **Watch** saves it to your Watchlist.

4. Buying & selling

Quick Buy — the one-tap entry

1. Set your amount once in the **Quick Buy SOL** box on any feed (or pick a preset). Every Buy button site-wide now reads "**Buy 0.1 SOL**" with your amount.
2. Tap Buy on any row. Done. Your preset's TP/SL arms automatically on managed wallets.
3. Or tell the Ask bubble: "*set quick buy to 0.5*" — or even "*buy 0.1 of <CA> with 25 tp 8 sl*".

Selling

From **Positions**: Sell 25% / 50% / Exit 100% / Custom %. From the chart page: the trade panel sells with live route preview. **Protected Buy** presets add a guarded entry with partial take-profits pre-armed.

The golden setup: managed wallet + preset with TP/SL + quick buy amount set = see pair, one tap, protected. Everything else is optional.

5. Positions & PnL

- Each position row answers "am I winning and am I protected": live value, **entry cost**, **current MC**, open PnL, **TP/SL armed state**, and a green/red "▲ +0.012 SOL since last refresh" note.
- **Arm Exits** opens the trade ticket for that bag if nothing is protecting it.
- **PnL page**: every closed trade with totals. **Card** downloads a branded PnL image; **Post** shares it to X (your referral link rides along automatically).

6. Automation: exits, sniper, bots, A.I.

Tool	What it does	Where
Server TP/SL	Watches prices ~every 2s, executes your take-profit / stop-loss / timer with the browser closed.	Armed on any buy; tracked in TP/SL Audit
OgreSniper	Seven scan modes; one-tap snipe with per-wallet amount + exits.	Intel → Sniper
Launch Watch	Watches a ticker; buys the second it goes live.	Ogre Tek → Launch Watch
Bundle	Buy/sell one token across many wallets at once.	Ogre Tek → Bundle
SlimeBot	Volume engine: deploys a SOL budget as randomized buys/sells, sweeps back when done.	Ogre Tek → SlimeBot
Ogre A.I.	Scans, ranks, and apes the best pick with exits armed. Autopilot runs it unattended inside hard caps you set (max per buy, per hour, concurrent plans). Every buy passes a final SlimeShield check — AVOID never buys.	Ogre Tek → Ogre A.I.
KOL Copy	Mirrors a tracked wallet's next buy from your wallets, exits armed.	Intel → KOL Tracker → Copy Wallet Next Buy

7. Launching a coin

1. **Ogre Tek → Pump Launch**: name, ticker, image (the site checks your image actually reaches pump.fun before creating), socials, dev buy.
2. **Anti-snipe is on**: your create + dev buy + bundle buys land in one atomic block — snipers cannot get between them.
3. Your launch auto-posts to SlimeWire's Telegram channels and groups with pump.fun + chart links — free promotion.

8. The Call Board (token rooms)

Scroll under any chart: that token's board. Post a structured call —  **Bullish** /  **Bearish** /  **Warning** /  **Question**, optional 2x/5x/10x target, 140-character why. The site stamps your call with the shield score and entry MC, then **tracks it automatically**: hit 2x and your call shows "  hit 2.4x" forever. Your handle carries your record (wins + hit rate) next to every post — reputation comes from results. One call per token per 6 hours. Every call row has **Buy** and **Watch** buttons so good calls turn into action instantly.

9. Phone alerts

1. **Profile** → **Alerts** → **Enable Push Alerts**.
2. iPhone: add SlimeWire to your Home Screen first (Share → Add to Home Screen), open from there, then enable.
3. You get pinged when a TP or SL fires, a plan fails, or a KOL copy executes — site closed, phone in pocket.

10. The Telegram bot (@OgreTradeBot)

In any group or channel

Command	What you get
<code>/look <CA></code>	Instant SlimeShield read + buttons:  Chart,  Buy on Site (buy panel pre-opened), Buy in DM, Dex,  Proof Wall.
<code>/alpha</code>	Top 3 scanner picks, every pair tap-to-chart, CAs tap-to-copy.
<code>/ape</code>	One fresh low-MC shot right now, honest verdict label included.
<code>/receipts</code>	SlimeShield's rug-call record with minutes-of-warning.
<code>/proof</code>	The engine's live W-L record + proof wall link.
<code>/mywins on</code>	YOUR take-profit wins post in this chat with your name (see below).
<code>/slimewire on</code>	(Admins) arms the live feed: plays every 15 min (3–4 picks, low-MC mixed in, verdict-labeled), 2x win receipts, fresh launches, stop-saves, KOL copies, daily report. Hard-capped posts per hour. <code>/slimewire off</code> any time.

Getting YOUR wins posted in your group — 3 steps

1. On the site: **Profile** → **Alerts** → "Track Wins in Telegram" — Telegram opens, tap **Start**. Your account is now linked (one time, one tap).
2. In your group: type `/mywins on`.
3. Done. When your server take-profit fires: "🔴 @you just banked +47% on \$XYZ — SlimeWire TP fired automatically." `/mywins off` stops it. Per-group, opt-in only.

In DM

Full trading: `/trade` (guided buy/sell), `/wallets`, `/balances`, `/positions`, `/pnl` (+ shareable card with `/card <token>`), `/sniper`, `/bundle`, backups, and `/web` for a site login code.

11. Sharing & X

- **The token page:** `slimewire.org/t?ca=<CA>` — shield verdict, live stats, chart, and the call board, no login needed. **This is the link to drop on X instead of Dex.** "Saw it on X? Verify it on SlimeWire."
- **Signal cards:** the  button on any call board renders a branded share image (verdict, MC, stats, CA). Post it with your token page link.
- **PnL cards:** from the PnL page after a win — the flex that brings people in.
- **The Proof Wall:** `slimewire.org/proof` — the engine's full public record: 2x wins with time-to-win, rugs flagged with minutes-of-warning, top groups, live-tracked calls. Wins AND losses. Quote it whenever someone asks "is this legit".

- **Referral on every share:** logged in, every X share you make automatically carries your referral link. Set your custom code in Profile → Referral (edit the part after /r/), add a payout wallet, and every flex earns.

The loop that grows your bags and the swamp: see a CA on X → verify on `/t?ca=` → call it on the board → buy with exits armed → TP fires → your win posts in your group with your name → share the card with your referral. Every step feeds the next.

12. Quick reference

I want to...	Do this
Check if a coin is safe	Paste CA in the Ask bubble, or <code>/look <CA></code> in TG, or open <code>/t?ca=<CA></code>
Buy fast with protection	Set Quick Buy SOL + preset once → tap Buy on any row
Sleep while protected	Managed wallet + TP/SL on the buy + push alerts enabled
Get pinged on my phone	Profile → Alerts → Enable Push Alerts
Post my wins in my group	Profile → Alerts → Track Wins in Telegram, then <code>/mywins on</code> in the group
Make my group smarter	Add @OgreTradeBot, admin runs <code>/slimewire on</code>
Build a caller reputation	Post calls on token boards — wins are tracked forever
Earn from sharing	Set your referral code in Profile — it rides on every share automatically
Launch a coin snipe-proof	Ogre Tek → Pump Launch (anti-snipe bundle is on)
Ask anything	The Ask bubble — it navigates, checks coins, trades, and answers in plain words
