

COMPLETE USER GUIDE

SLIMEWIRE

The degenerate trading terminal with a game built on top. This guide walks you through everything — the terminal, the Swamp game, raids, the Telegram bot, and sharing on X — in plain language.

slimewire.org · User Manual

SlimeWire is a Solana memecoin trading terminal — and a game. You can trade live coins, launch your own, hunt fresh launches, and play **The Swamp**, where real coins become creatures you catch and bosses you raid. This guide covers every feature you'll actually use. No technical setup, just how to navigate and what each thing does.

What's inside

1. [Getting started](#)
2. [The Terminal](#)
3. [SlimeShield safety](#)
4. [Trading & wallets](#)

11. [Tips & FAQ](#)

1. GETTING STARTED

Open **slimewire.org**. You land on the connect screen with three ways in:

- **Connect Wallet** — connect Phantom or Solflare to trade with your own wallet.
- **Create Account** — make a SlimeWire account (email) to save settings, presets and managed wallets.
- **Browse Terminal** — look around with no login. Great for scanning and playing the game before you commit.

Tip: You can play the whole Swamp game and browse the terminal without connecting anything. You only need a wallet when you want to actually buy, sell or launch.

2. THE TERMINAL

The terminal is your command center. The left navigation is grouped into sections — here's what every tab does.

Terminal

TAB	WHAT IT DOES
Live Terminal	Your main dashboard — live fresh pairs, best picks, KOL signals and quick trades in one view.
Home / Profile	Your account: profile image, X handle, referral code, and saved settings.
Smart Chart	Open any token's chart, links, transactions and trading context.
Slime Swap	Manual single-wallet swap with size presets — the fast buy/sell panel.

Market Intel

TAB	WHAT IT DOES
Cooks	Scan fresh and trending pairs cooking right now.
Live Trades	Live market activity and trade flow as it happens.
Slime Scope	Scan fresh, graduating and graduated pump-style movement.
Watchlist	Coins you've saved to track and their movement.
KOL Tracker	Watch KOL wallets, public signals and copy-trade candidates.

Ogre Tools

TAB	WHAT IT DOES
Ogre Tek	The automation deck — A.I. picking, SlimeBot, bundle, launch and snipe tools in one place.

Portfolio

TAB	WHAT IT DOES
Wallets / Balances	Your balances, managed wallets, restore, sweep and funding tools.
Positions	Open holdings with manual exit controls.

Play

The nav also has  **Play The Swamp** and  **Live Raids** — your entry points to the game and the raid board.

3. SLIMESHIELD SAFETY READ

Before you ape, SlimeWire gives every token a **SlimeShield** read — a quick verdict on whether a coin looks safe or risky. You'll see it on token pages and when you paste a contract address.

- **Verdict** — a plain call (safe / risk / avoid) with the reasons behind it.
- **Signals** — liquidity, momentum, sell pressure and common rug patterns checked automatically.

Always your call: the shield is a helper, not a guarantee. Memecoins are high risk — only spend what you can lose.

4. TRADING & WALLETS

Buying & selling

- Open a token (tap any coin, or paste its contract). Use **Slime Swap** or the token's **Ape** button.
- Pick a size preset or type an amount, confirm, done. Your fill shows in **Positions**.
- Exit any position manually from **Positions**, or set take-profit / stop-loss where available.

Wallets

- **Connected wallet** — your own Phantom/Solflare.
- **Managed wallets** — wallets SlimeWire creates for you (fund, sweep, restore) for faster trading and automation.

Never share your seed phrase. SlimeWire will never ask for it in chat.

5. LAUNCHING A COIN

Launch your own coin from the terminal (**Ogre Tek** → **Launch**) or the [/launch](#) page. On SlimeWire a launch isn't just a page — **your coin becomes content**:

- It appears on the **Fresh Launch Radar** and in the terminal feed.
- It spawns as a **boss** on the Live Raids board and as a **legendary creature** in the Swamp.
- It can fire Telegram alerts and generate share cards automatically.

6. THE SWAMP GAME

Open slimewire.org/swamp or tap **Play The Swamp**. It's free, runs in your browser, and is built on real live coins.

The basics

- **Move** — drag anywhere on the left (mobile) or use WASD / arrow keys (desktop).
- **Pick your ogre** on the title screen.
- Live memecoins roam the swamp as **wild creatures**. Fresh launches are **rare**; SlimeWire launches are **legendary**.

Catching coins (your Dex)

- Walk up to a creature and tap 🐾 **Catch**. You'll see its real stats (market cap, age, momentum).
- **Weaken then catch**: tap ✂️ **Weaken** to lower its HP — the lower its HP, the higher your catch chance. Then time the throw bar and tap **Throw**.
- Catches go in your **Swampdex** with a rarity. Your caught coins set your **Swamp Worth** (their performance since you caught them).
- **Slimeballs** are your catch energy — they refill over time, and you can craft more from resources.

Fighting & resources

- Hostile mobs (goblins, wolves, bears) roam too. Tap the ✂️ **Attack** button to fight them.
- Defeated mobs drop **resources** (wood, scrap, goo). Spend them at the **Clan Camp** to craft slimeballs and fortify your base.

Raid days, clans & survival

- **Raid Day** window (Sat 2pm → Sun 2am UTC): more and tougher enemies. The rest of the week you build and gather. Watch the HUD countdown.
- **Clans** — set a clan tag at the Clan Camp. Everyone with your tag forms a **crew** that competes together (see [/crews](#)).
- **Other traders** walk the same map live — you'll see them around you.

Trade perks (never required)

The game is 100% free. Trading just **rewards** you: your real Swamp Worth buffs your damage and HP, catching feeds your Dex, and launching a coin earns a legendary. You never have to trade to play.

7. LIVE BOSS RAIDS

Open slimewire.org/raids. Every live launch is a **boss** with HP based on its bonding/market cap.

- **Ape / Chart** — buy or view any boss instantly.
- **Join Raid** — opens a pre-filled X post and scores you on the **raid leaderboard**. Rally your crew for more points.
- **Raid your own coin** — paste *any* contract address (you don't need to have launched it on SlimeWire) and it goes on the board as a "Crew Raid" boss with real market data.
- **Top Raid Posts** — X posts submitted via the Telegram `/raid` command, ranked by likes + retweets.

8. LOOP PAGES

Standalone pages that make the swamp social and sticky:

Radar </radar>

Clean, fast scan of fresh launches — buckets like "Fresh under 5k", "Volume waking", "Bonding fast". One-tap Ape / Chart / Raid.

Events </events>

The degen event calendar — Boss Raid Night (live countdown), Fresh Launch Hour, catch contests, survival runs.

Profile </profile>

Your swamp identity — catches, raid points, survival, badges and crew. Share your page on X.

Swamp Card </receipts>

Generate a clean shareable card of your run (catches, Swamp Worth, raid points). Download & post it.

Crews </crews>

Telegram/X groups compete by clan tag. Everyone's catches + raids stack into the crew total.

Locker </locker>

Cosmetics you unlock by playing — titles, badges and skins, with completion progress.

Watchtower </watchtower>

What the swamp watches — most-raided coins, trending fresh, and your watchlist.

Coin Story </replay>

Paste a contract to replay a coin's journey — born, liquidity, bonding, boss, catchable.

9. TELEGRAM BOT

Add the SlimeWire bot or DM it. In a group, an admin runs `/slimewire on` to arm live alerts. Commands anyone can use:

COMMAND	WHAT IT DOES
<code>/start</code>	Open the menu / link your account.
<code>/look <CA></code>	SlimeShield read on a contract — verdict, chart and trade links. (In groups, just pasting a contract does this automatically.)
<code>/alpha</code>	Current best picks / trending coins.
<code>/ape</code>	The freshest degenerate launches right now.
<code>/raid <X link></code>	Put your X raid post on the raid leaderboard, ranked by likes + retweets.
<code>/proof</code>	The public engine track record (wins and losses).
<code>/kols</code>	KOL / whale activity.
<code>/receipts</code>	Latest SlimeShield receipts.
<code>/web</code>	Jump to the web terminal.
<code>/slimewire on off</code>	(Group admins) arm or mute SlimeWire alerts in that group.

✖ 10. SHARING ON X

SlimeWire turns your activity into shareable content — every share carries the site back to X:

- **Swamp Card** (`/receipts`) — download your run card and post it.
- **Flex / Shill buttons** — in the game and on coins, one tap opens a pre-filled post with the contract and links.
- **Join Raid** — posts your raid for a coin and gets you on the raid board.
- **Profile** — share your `/profile` page to show off your Dex and badges.

? 11. TIPS & FAQ

Do I need a wallet to play the game?

No. The Swamp, raids and all loop pages are free with no login. A wallet is only for actually buying, selling or launching.

How do I get on a leaderboard?

Set a tag (in the game and on /raids). Catches feed the catch board, raids feed the raid board, survival feeds the survival board, and your clan tag feeds the crews board.

How do I bring my group in?

Pick a clan tag, have your Telegram/X group all set the same tag, and grind together on the [/crews](#) board.

Is the SlimeShield read a guarantee?

No — it's a fast safety helper. Memecoins are risky; only spend what you can afford to lose.

Fastest loop: scan `/radar` → ape or raid a coin → catch it in the `/swamp` → post your `/receipts` card → bring your crew via `/crews` .
